DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see pages 17 and 18, filed 31 August 2004, with respect to independent claims 1, 18 and 28 have been fully considered and are persuasive. The rejections of all claims has been withdrawn.

Allowable Subject Matter

2. Claims 1-40 are allowed over the Prior Art of record.

3. The following is an examiner's statement of reasons for allowance: The primary reasons for the allowance of the independent claims 1, 18 and 28 is the inclusion of the limitations of a measurement while drilling (MWD)/logging tool and method steps for use in a borehole in an earth formation for determining a bed boundary away from the borehole wherein a first sensor having a substantially uniform azimuthal response function or uniform azimuthal response characteristic at a plurality of rotational positions of the tool. Note: the term "uniform" is defined by Merriam-Websters Dictionary, 10th Edition as: ***having always the same form, manner, or degree: not varying or variable.*** None of the Prior Art teaches this capability, in fact, teaches only the correction/compensation of data collected by sensors, for removing the rotational effects of the tool. For example, Prior Art reference US 5,159,577 to Twist, wherein a first (resistivity) sensor's measurements are corrected/compensated for the rotation of the tool within a borehole, thus the sensor functions non-uniformly, or varying as the tool rotates within the borehole.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Freedman, Frey et al. and Sinclair et al. all teach sensor measurements within boreholes with correction/compensating means.
